

PRINTING:

Print both designs included back to back one on each side of a single piece of paper. For them to line up set the page set up to "center" and always insert your paper in the same direction into the printer. Print both sides of the paper. You can then decorate or wait until you have folded your puzzle purse.

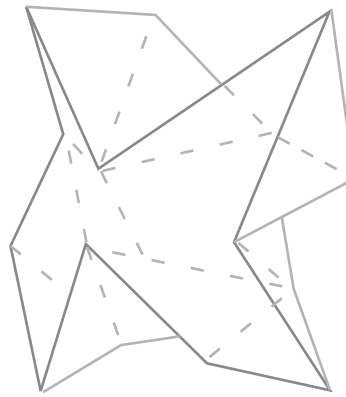

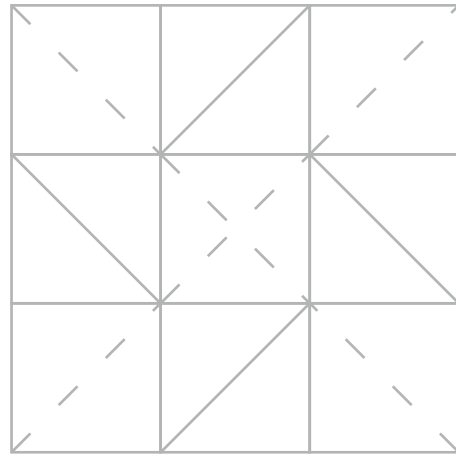

HOW TO FOLD:

The purse will open and fold much more easily, if it's only folded along the lines shown.

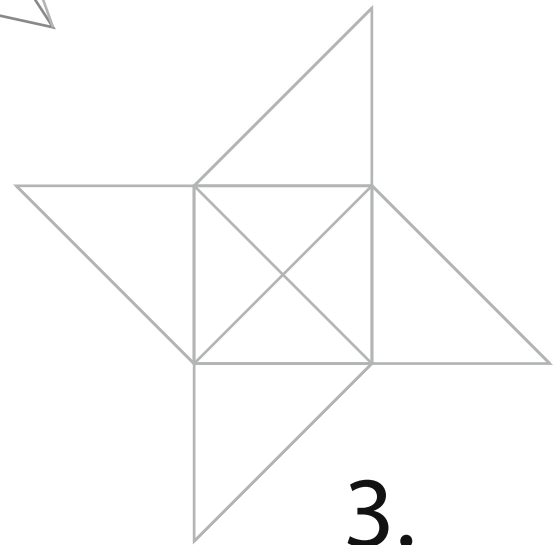

1. Dotted lines are mountain folds (the paper bends away from you) and solid lines are valley folds (you can look deep into the valley formed).

When finished, take two diagonally opposite corner squares, one in each hand. Hold the 2 opposite corners in each hand so you have two "ears", and **2.** bring towards center while twisting gently, bringing your right hand toward you and your left hand away from you so that the purse spins on its vertical axis. **3.** Flatten the pinwheel thus created, **4.** and fold each outthrust point across the center square in clockwise order. Tuck the last leaf into the center and you're done!
